Product Data Sheet Edition 04/05/2012 Identification no: 02 08 01 04 006 0 000007 Sikafloor®-326

Sikafloor[®]-326

2-part PUR tough-elastic, low-VOC, self smoothing floor

Product Description	Sikafloor [®] -326 is a two part solvent free coloured self-smoothing PUR resin with tough-elastic properties.
Uses	Smooth wearing course with crack-bridging properties for industrial floors in production and storage facilities, work shops etc.
	Broadcast wearing course with crack-bridging properties for wet working areas (food and beverage industry etc.), car park decks and loading ramps etc.
	Can be subjected to normal to medium heavy mechanical and chemical stress
Characteristics /	Flexible and tough-elastic
Advantages	Crack-bridging
	Good chemical and mechanical resistance
	Low VOC emitting
	Solvent-free
	Possible slip resistant surface
	Liquid proof
	Easy to apply
	Easy to clean
	Economical
Tests	
Approval / Standards	Coating for concrete protection according to the requirements of EN 1504-2:2004 and EN 13813:2002, DoP 020801040060000007 1008 certified by Factory Production Control Body, 0921 and provided with the CE-mark.
	Fire classification in the radiant panel apparatus and smoke rating: Reports No. 2011-1895 and 2011-1896 Exova Brandhaus Germany
	Emission test according to the German AgBB -scheme and guidelines of the DiBt (AgBB – Committee for Health-related Evaluation of Building Products, DiBt – German Institute for Building Technology). Sampling, testing and evaluation were performed according to ISO-16000, Report No. G10003B, Eurofins Product Testin A/S, Denmark.
	Emission test according to the French AFSSET -scheme and guidelines. Sampling testing and evaluation were performed according to ISO-16000, Report No. G10003C, Eurofins Product Testing A/S, Denmark.
	ISEGA - EN1186, EN 13130, and prCEN/TS 14234 standards, and the Decree on Consumer Goods for contact with food stuffs, according to test report by ISEGA, Registered Nº 33045 U 12, dated 31. January 2012
	Particle (vs.PA6) emission certificate: Cleanroom Suitable Materials CSM Statement of Qualification, class ISO 4. Tested by IPA report No. SI 1108-568.
	Particle (vs.PA6) emission certificate: Cleanroom Suitable Materials CSM Statement of Qualification, GMP A. Tested by IPA report No. SI 1108-568.
	Outgassing VOC emission certificate: Cleanroom Suitable Materials CSM

Statement of Qualification, ISO-AMCm class -7.3. Tested by IPA report No. SI 1108-568.

Biological Resistance Class "Very Good "–Cleanroom Suitable Materials Evaluation of the biological resistance in accordance with ISO 846. Tested by IPA report No. SI 1108-568.

Mixing	Part A : part B = 73 : 27 (by weight)
Mixing Time	Prior to mixing, stir part A mechanically. When all of part B has been added to part A mix continuously for 2 minutes until a uniform mix has been achieved.
	When parts A and B have been mixed, add the quartz sand F34 $0.1 - 0.3$ mm and mix for a further 2 minutes until a uniform mix has been achieved.
	To ensure thorough mixing pour the materials into another pail and mix again to achieve a consistent mix.
	After mixing leave the mixture for 3 minutes to react before applying. This so called induction time minimizes the appearing of colour shade differences. When the Sikafloor-326 is finished using a pigmented topcoat, this procedure is not necessary.
	Over mixing must be avoided to minimize air entrainment.
	The product has been designed to be filled and mixed in one pail, without the need to split the mixture over two pails.
	When splitting the product over 2 pails, make sure to split the A-component and the B-component before mixing, and do not split the mixture. When splitting the mixture, differences in reaction-time can lead to colour differences on the floor.
Mixing Tools	Sikafloor [®] -326 must be thoroughly mixed using a low speed electric stirrer (300 - 400 rpm) or other suitable equipment.
Application Method /	Prior to application, confirm substrate moisture content, r.h. and dew point.
Tools	If > 4% pbw moisture content, Sikafloor [®] EpoCem [®] may be applied as a T.M.B. (temporary moisture barrier) system.
	<i>Primer:</i> Make sure that a continuous, pore free coat covers the substrate. If necessary, apply two priming coats. Apply Sikafloor [®] -161 by brush, roller or squeegee. Preferred application is by using a squeegee and then back rolling crosswise.
	<i>Levelling<u>:</u></i> Rough surfaces need to be levelled first. Therefore use e.g. Sikafloor [®] -156 levelling mortar (see PDS).
	Self smoothing system: Sikafloor [®] -326 is poured, spread evenly by means of a serrated trowel or pin rake. Roll immediately in two directions with spiked roller to ensure even thickness and to remove entrapped air.
	Broadcast system: Sikafloor [®] -326 is poured, spread evenly by means of a serrated trowel or pin rake. Then, level and remove entrapped air with a spiked roller and after about 10 minutes (at +20 °C) but before 20 minutes (at +20 °C), broadcast with quartz sand, at first lightly and then to excess.
	Seal coat Broadcasted system: 1-2 Sealer coats can be applied by squeegee and then back-rolled (crosswise) with a short-piled roller.
	A seamless finish can be achieved if a "wet" edge is maintained during application.

Cleaning / Maintenance

Maintenance	
Methods	To maintain the appearance of the floor after application, Sikafloor [®] -326 must have all spillages removed immediately and be regularly cleaned using rotary brush, mechanical scrubbers, scrubber dryer, high pressure washer, wash and vacuum techniques etc., using suitable detergents and waxes.
Note	The following chapter is only mandatory for European countries.
EU Regulation 2004/42	According to the EU-Directive 2004/42, the maximum allowed content of VOC (Product category IIA / j type sb) is 550 / 500 g/l (Limits 2007 / 2010) for the ready to use product.
VOC - Decopaint Directive	The maximum content of Sikafloor[®]-326 is < 500 g/I VOC for the ready to use product.
Value Base	All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.
Local Restrictions	Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.
Health and Safety Information	For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.
Legal Notes	The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
